PURELAB Pulse... Optimum quality pure water

Unique
Recirculation
Design

Patented
EDI
Technology

The new PURELAB Pulse has been designed to produce high quality pure water at economical running costs. Suitable for a wide range of scientific applications it is the only Type II system that recirculates water up to the dispense point to maintain optimum purity.

Water quality meets or exceeds international standards and the system is very easy to operate and maintain. Furthermore because the PURELAB Pulse has extended operation time between routine sanitization it is more productive and environmentally friendly.
